Normalized Income Statement

To present a clear picture of a company's financial performance, I applied the process of normalization, which involves adjusting financial statements to remove the impact of non-operational activities, align expenses with market conditions, and exclude discretionary items. Normalized earnings reflect a more useful assessment of financial performance and facilitating meaningful comparisons. This approach enhances transparency and supports informed decision-making in financial analysis and valuation.

EBITDA adds any expense recognized for interest, depreciation and amortization to ordinary business income which excludes income taxes. Seller Discretionary Earnings (SDE) adds officer compensation to EBITDA.
